SLOPE RULES

Ski safely. Respect others. Help others.

Users of alpine ski slopes must have valid insurance covering their liability for damage caused to third parties.

1 Choose a slope and speed suited to your technical ability and physical condition, as well as the slope, weather and traffic conditions.

2 Reduce speed in areas with limited visibility, near buildings or obstacles, at crossings and junctions, in fog, haze, poor visibility or crowded areas, at narrow points and when beginners are present.

3 Keep a safe distance on your chosen line, taking into account the slope, visibility and equipment. The user coming from above must choose a line that avoids collisions, obstruction and danger to users below.

4 Before overtaking, make sure there is enough space and visibility. Overtaking is permitted from either side, but always leave enough distance to avoid obstructing the person being overtaken.

5 Give way to piste and rescue service vehicles and never obstruct their progress.

6 Make sure that entering or crossing the slope is possible without endangering yourself or others.

7 At crossings, change your line and reduce speed to avoid contact with users approaching from another direction or another slope, even if they are coming from above.

8 Do not stop at narrow points, near brows or in areas with limited visibility. If you stop, avoid endangering others and move to the edge of the slope.

9 After a fall, clear the slope as quickly as possible and, if necessary, move to the edge of the slope.

10 On request, provide your personal details to the responsible piste supervision and control authorities if you are involved in or witness an accident, or if you have helped users in difficulty.

11 Use skis, snowboards or similar equipment with suitable retention or braking devices to prevent sudden detachment from endangering others.

12 While staying in mountain huts or elsewhere, store equipment (skis, snowboards, poles, etc.) outside the ski area so that other people are not obstructed or endangered.

13 Do not enter or use the training slope.

14 When skiing, snowboarding, telemarking, sledding or bobsledding in ski areas, wearing an approved protective helmet is mandatory.
